About

I build trust first products for students and parents facing high stakes decisions.

I'm the founder of KSM × Tech, where I'm building systems around career clarity, discipline, and emotional steadiness.

My flagship product, Margadarshak, is a career guidance system for students from Class 9 to post graduation. It helps users think clearly about paths, eligibility, exams, documents, trade offs, and backup routes, while giving parents a more grounded way to take part in important decisions.

I'm also building Jarvis Abhyas, a daily companion for students working toward big goals. It is structured around Health, Wealth, Discipline, and Wisdom, with Focus as the execution layer, helping students deal with procrastination, panic, scattered thinking, and broken routines through voice, reflection, planning, and capture.

Krishna as Sarathi is the third product in this ecosystem, built for heavy mind moments like fear, guilt, grief, pressure, family stress, and loss of direction.

I build as a solo founder, using AI as an implementation partner while staying deeply involved in product thinking, user pain, architecture, flow design, and long term direction. Across these products, I have been shaping the foundations in Flutter, adaptive onboarding, role aware feature systems, local first architecture, and structured content workflows.

This work is personal. I chose the wrong path at 16 because no one helped me see clearly. I'm building what I wish had existed then.

Real guidance should never be a privilege.

Founder & Product Architect

KSM x Tech

Dec 2025 - Present • 6 mos

Building trust-first products for career clarity, student growth, and parent decision-making.

- Building Margadarshak, a stage-aware guidance system for students from Class 9 to post-graduation.
- Designing Jarvis Abhyas as a daily discipline companion built around reflection, planning, and focused execution.
- Developing Krishna as Sarathi as a support layer for fear, pressure, guilt, grief, and mental overload.
- Leading product direction, architecture, UX flow, and research while using AI as an implementation partner. two is website - <https://ksmxtech.com/> three is pdf four Mārgadarshak

page <https://ksmxtech.com/margarashak/> we have to make consistent in our identity and other information so audit and analyze inconsistent things then we will fix that

Yes — the identity is mixed right now, and the biggest problem is not the products themselves but the way each surface introduces them. Your clearest center is already visible: KSM X Tech is the parent studio, Margarashak is the flagship, and the public voice works best when it stays guidance-first, family-rooted, and impact-led instead of technical. [\[1\]](#) [\[2\]](#) [\[3\]](#) [\[4\]](#)

## Biggest gaps

The homepage frames KSM X Tech as “Where Family Values Meet Modern Innovation” and as a family-rooted studio with three guidance systems, while the saved LinkedIn profile still leans much more toward a builder identity with “Flutter & AI Developer” language and technical self-description. The Margarashak page and the PDF are much stronger because they explain the product through student pain, parent confusion, eligibility, exams, backups, and regret prevention in plain language. [\[2\]](#) [\[3\]](#) [\[4\]](#) [\[1\]](#)

## Inconsistency map

| Surface issue         | What is inconsistent                                                                                                                                                                                                                                                                                                                     | Best fix                                                                                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parent brand tone     | The homepage leads with family, values, roots, and long-term meaning, but the saved LinkedIn snapshot leads with developer/tech identity first. <a href="#">[4]</a> <a href="#">[2]</a>                                                                                                                                                  | Keep the parent brand line value-led everywhere, and push technical identity down into skills, experience, or founder details only. <a href="#">[4]</a> <a href="#">[2]</a>                                                                                             |
| Product hierarchy     | The homepage presents three guidance systems at once, while the PDF and Margarashak page become much clearer when they stay centered on Margarashak alone. <a href="#">[4]</a> <a href="#">[3]</a> <a href="#">[1]</a>                                                                                                                   | Make Margarashak the default first mention on public-facing surfaces, and treat Jarvis Abhyas and Krishna as Sarathi as secondary ecosystem products unless the page is specifically about the full studio. <a href="#">[4]</a> <a href="#">[3]</a> <a href="#">[1]</a> |
| Language style        | The Margarashak page speaks in simple decision language like “Not motivation. Decision clarity.” and “What can I do now?”, while the saved LinkedIn snapshot includes architecture/code-oriented framing that belongs more to a technical bio than a public identity layer. <a href="#">[3]</a> <a href="#">[2]</a>                      | Use the website/product-page language as the master style guide for PDF, footer, LinkedIn About, and founder bio. <a href="#">[3]</a> <a href="#">[1]</a>                                                                                                               |
| Product status        | The PDF says Margarashak already works fully offline for its core guidance experience and lists 9 current modules including document and deadline tracking, but the Margarashak page says the core guidance flow is working in local build and puts documents and deadline tracker under “Next.” <a href="#">[1]</a> <a href="#">[3]</a> | Reconcile this first, because status contradictions weaken trust faster than wording issues. <a href="#">[1]</a> <a href="#">[3]</a>                                                                                                                                    |
| Proof and credibility | The PDF explicitly says the evidence base includes 86 verified public student stories across 6 Indian languages, but the Margarashak page currently shows real stories without foregrounding that aggregate proof in the same sharp way. <a href="#">[1]</a> <a href="#">[3]</a>                                                         | Bring the 86-story / 6-language proof line into the website or product page so your credibility feels consistent across surfaces. <a href="#">[1]</a> <a href="#">[3]</a>                                                                                               |

## What already aligns

Some parts are already strong and should become your fixed identity anchors: “The guide I needed at 16,” the student-and-parent framing, the “what if?” decision model, and the anti-manipulation stance against pay-to-rank or revenue-biased guidance. The product page’s rule that no student’s future should be sold to the highest-paying institution matches the PDF’s argument that honest guidance should stay free from coaching and revenue conflicts. <sup>[3]</sup> <sup>[1]</sup>

## Canonical identity

The cleanest brand stack is this: KSM X Tech is a family-rooted, guidance-first studio; Margadarshak is the flagship; Jarvis Abhyas and Krishna as Sarathi are supporting products in the wider ecosystem. Margadarshak should be described everywhere in the same plain-language way: a student guidance system for Indian students and parents, currently a working Android prototype progressing toward beta, built to answer streams, eligibility, exams, costs, risk, backup routes, and parent decision questions. <sup>[4]</sup> <sup>[1]</sup> <sup>[3]</sup>

## Fix order

First, lock the master identity sentence and product hierarchy; second, fix the status contradiction between the PDF and the Margadarshak page; third, remove extra technical self-description from public-facing founder copy; fourth, add the evidence-base line to the website. Once those four are aligned, your footer, PDF, founder bio, and product pages will all sound like one company instead of four different voices. <sup>[1]</sup> <sup>[2]</sup> <sup>[3]</sup> <sup>[4]</sup>

Shall I turn this into a strict canonical messaging sheet with exact final copy for 1) homepage, 2) footer, 3) Margadarshak page, and 4) PDF header/about lines?
